摘要

2003 年 6 月 23 日，一位懷孕三十周安胎中孕婦，在由金門轉送臺北飛行途中的固定翼機艙內緊急產下一名 2,230 公克女嬰。Apgar score 1 分鐘和 5 分鐘，分別是 6 和 9 分。該名十九歲孕婦在 6 月 21 日因子宮早期收縮住進金門縣立醫院進行安胎。由於安胎情況不良及考慮早產胎兒照護問題，病人欲由金門轉送臺北某醫學中心進一步治療。而此轉送任務由國際 SOS 醫療團隊執行。途中一切順利直到飛機降落前數分鐘，孕婦緊急早產，結果母女平安。。

Abstract

A 2,230 gm premature female infant was safely delivered onboard a fixed-wing aircraft during an evacuation flight from Kinmen to Taipei on the 23(superscript rd) of June 2003. The Apgar score was 6 and 9 at 1 and 5 minutes, respectively. The infant's 19 years old mother was at 30 weeks estimated gestation age (EGA) before she suffered premature uterine contractions on the 21(superscript st) June. She was admitted to the Kinmen County Hospital where tocolytic therapy was given immediately. She was then transferred to a tertiary medical center in Taipei, owing to her premature condition. Aero-medical evacuation by an International SOS medical team went smoothly until minutes before landing. Emergency delivery of the baby was performed and both mother and baby were in stable conditions.
