摘要

一位七十三歲男性病人因持續發燒以及急性尿滯留而住院，經檢查後證實為巨大攝護腺膿瘍。我們用經直腸超音波作為導引，進行經會陰部穿刺術來引流膿瘍。爾後再利用電腦斷層掃瞄來確定引流已經完全。以此方法來處理巨大攝護腺膿瘍，既有效，且具有低侵犯性，值得推薦。

Abstract

Transrectal Ultrasound-Guided Transperineal Drainage of a Huge Prostatic Abscess: A Case Report with Literature Review A 73-year-old male patient who was suffering from acute urine retention and fever was diagnosed as having a huge prostatic abscess. Transrectal ultrasound-guided transperineal drainage was performed, and adequate drainage was followed-up by pelvic computed tomography. We conclude that transrectal ultrasound-guided transperineal drainage is an effective, minimally invasive treatment for a huge prostatic abscess.
