摘要

五十二歲的女性病患，因重覆性腹痛求診。在症狀出現的一個月後，來到本院急診求診。經抽血檢查以及尿液檢查，報告值均呈現正常。在急診處我們幫此病患做了腹部超音波，顯示出腸套疊。隨即照會一般外科醫師會診，並安排開刀治療，病理報告證實是脂肪瘤。

**Abstract**

A 52-year-old female had suffered from recurrent abdominal pain for about one month and, for this reason, she attended our emergency department. Her blood and urinary sample examinations were normal and so we performed abdominal sonography on the patient. The pictures showed intussusception. After consultation with a general surgeon, an operation was arranged. The final pathology report proved the patient suffered from ileoileal intussusception. The cause was a lipoma
