Abstract

The biomedical industry is the star of global industry, and Taiwan government is also to do the best to development this industry. Overview this industry in the global, it need the fully support by the government's policies, but also help grow the biomedical research implement to the commercialization and industrial. By development the basic biomedical research platform – Clinical Genomic Research Platform (CGR Platform), hope it can apply this platform to series connection the upper, middle and downer industry in our country. We hope it can promote the biomedical basic research in this industry, and obtain the best performance and reduce the time that the goods entry the markets, then to reach a distant view of biomedical science island in Taiwan.
