

Manganese(III) acetate mediated oxidation of aporphines: a convenient and useful synthesis of oxoaporphines

Om V. Singh , Wei-Jan Huang , Chung-Hsiung Chena , Shoei-Sheng Lee

Abstract

Manganese(III) acetate mediated oxidation of aporphines to oxoaporphines is described. The developed methodology was conveniently applied for the synthesis of naturally occurring oxoaporphine alkaloids, oxoglucine, and atheroline, starting from commercially available boldine.
