

New lignans from the heartwood of *Cunninghamia lanceolata*.

Lee TH, Yeh MH, Chang CI, Lee CK, Shao YY, Kuo YH.

Abstract

Two new lignans, including the aryltetralin-type lignan, lanceoline (1), and the diaryl butyrolactone-type lignan, 5-methoxytrachelogenin (2), together with 5-methoxywikstromol (3), were isolated from the low-polar layer of a heartwood extract of *Cunninghamia lanceolata* as their acetylated derivatives 1a, 2a and 3a, respectively, and were identified by spectroscopic analyses. The ¹³C-NMR data for 3a are reported for the first time in this paper.
