摘要

Abstract

- Patients and methodology
- Results
- Patients' demographic data
- Changes in the perceived HRQoL
- Changes in the perceived WC
- Correlation between changes in the perceived HRQoL and WC
- Major difficulties and stress encountered during the recovery process
- The pressure of intense postoperative pain, discomfort, and sense of insecurity
- Feeling frustrated from physical incompetence in reality testing
- Struggling between the dependency on transplant professionals and independent self-care
- Discussion
- Factors influencing the recipients' perceptions of HRQoL and WC during hospitalization period
- Factors influencing the recipients' perceptions of HRQoL and WC during postdischarge period
- References
